
Structural CAD and BIM Technician

We are a creative firm of structural engineers and designers who enjoy working collaboratively as a team in a casual, fun office environment. At Daedalus we believe that the structure provides an opportunity to expand and help shape the finished architecture and building envelope, and we consistently strive to stretch the boundaries of engineering to help our clients develop new, creative ways to achieve their project goals. We are fortunate to work with many of the Bay Area's top architectural firms focusing on a broad mix of project types including high end custom residential, education, civic, commercial, and institutional projects. Beyond the general scope of engineering work we are currently developing a proprietary integrated long span and ceiling framing system and offer 3D printing of complicated structures/connections to help our clients visualize the final construction. We also have special expertise in earth retention/shoring systems, and we are aggressively pursuing MTC projects here in the Bay Area with teaming partner, Fast + Epp, out of Vancouver. Our project locations range from Northern to Southern California and Hawaii.

We are currently seeking experienced ACAD and BIM technicians with an appreciation for architecture and design to join our team

Job Requirements

- Experience with Revit and ACAD in the building design industry is a must
- Ability to read and understand structural drawings is a plus
- EIT is preferred
- Candidates must be proactive, have strong organizational skills, excellent written and verbal communication skills, and be client-service oriented

Daedalus is an equal opportunity employer. In addition to a highly competitive salary and a full benefits package, other perks include an additional week off during the holidays, a profit-sharing plan, flex time, and more.
